## REQUIREMENT ANALYSIS

1. Project Information				
<b>Project Name:</b>	<b>Task Management System</b>			
<b>Project Description:</b>	The Task Management Web App is a browser-based application designed to streamline task creation, assignment, tracking, and project-module management for teams. This system will offer a modern, accessible, and user-friendly experience with secure role-based access and real-time updates to improve internal workflow and productivity.			
2. Project Team				
<b>Project Manager:</b>	Name	Designation	Contact	E-mail
<b>Team Members:</b>	Md. Najim Uddin	Manager (MIS)	01888818557	najim@hpl.com.bd
	Jakia Rahman	Intern (MIS)	01768997799	jakiarahman326@gmail.com
	Kamrun Nahar	Intern (MIS)	01981006695	kamrunnaharumi2000@gmail.com
3. Project Scope				
Project Purpose				
Manual or desktop-only systems lack flexibility, collaboration features and remote accessibility. This project aims to solve these challenges by offering a centralized task management platform that enables project managers and team members to monitor project progress, assign responsibilities, and manage modules with transparency and efficiency.				
Objectives				
<ul style="list-style-type: none"><li>a. Build a responsive web-based task management system accessible to all team members.</li><li>b. Design role-based access for Admins, Employees, and Managers.</li><li>c. Create a project-module structure that mirrors organizational workflows.</li><li>d. Implement real-time task creation, status tracking, and deadline management.</li><li>e. Enable filtering, sorting, and reporting of tasks by status, user, or deadline.</li><li>f. Automated email notifications to team members when tasks are assigned or updated.</li><li>g. Export Task Reports/ Team Member Reports for annual performance tracking.</li></ul>				
4. Deliverables				
Date	Tasks		Assigned Team Member	
	Requirements Analysis			
	Wireframes / UI Design			
	Database Schema & ERD			
	User Authentication Module			
	Project, Module, Task Entry Interface			
	All Feature Management Dashboard			
	Filtering & Search			
	Export / Report Generation			
	QA Test Cases			
	Early Testing Report			
	Bug Fix & Final Revisions			
	Deployment

5. Functional Features Analysis	
Features	Description
1. User Login & Registration Module	<p>◊ <b>Purpose:</b> To authenticate users (Admin, Manager, Employee) and grant them access to system features based on their role.</p> <p>◊ <b>Functional Details:</b></p> <ul style="list-style-type: none"> <li>• <b>Login:</b> <ul style="list-style-type: none"> <li>○ Users enter email/username and password.</li> <li>○ System validates credentials.</li> <li>○ Role-based redirection (e.g., Admin Dashboard, Employee Task board).</li> <li>○ Invalid credentials show error.</li> </ul> </li> <li>• <b>Registration:</b> <ul style="list-style-type: none"> <li>○ Only Admin can register new employees.</li> <li>○ Input: Name, Email, Role, Department, Designation, Password.</li> <li>○ Auto-generation of employee ID (optional).</li> <li>○ Validation of unique email.</li> <li>○ Confirmation message after successful registration.</li> </ul> </li> </ul>
2. New Project Entry Interface	<p>◊ <b>Purpose:</b> To allow Admin/Project Manager to create new projects and define their scope.</p> <p>◊ <b>Functional Details:</b></p> <ul style="list-style-type: none"> <li>• <b>Input fields:</b> <ul style="list-style-type: none"> <li>○ Project Name</li> <li>○ Description / Remarks</li> <li>○ Client Name (optional)</li> <li>○ Estimated Start and End Dates</li> </ul> </li> </ul> <p>◊ <b>Validation:</b></p> <ul style="list-style-type: none"> <li>• Auto-generation of Project ID</li> <li>• Once created, displays success confirmation box, appears in project list and is available for Module and Task assignment.</li> </ul> <p>◊ <b>Flowchart:</b></p> <pre> graph TD     Start([Start]) --&gt; Create[Create New Project]     Create --&gt; EnterName[Enter Project Name]     EnterName --&gt; EnterRemarks[Enter Remarks]     EnterRemarks --&gt; Click[Click 'Create Project']     Click --&gt; Generated[New Project ID Generated]     Generated --&gt; Saved[New Project Saved in Database]   </pre>
3. New Module Entry Interface	<p>◊ <b>Purpose:</b> To break down a project into smaller manageable modules or milestones.</p> <p>◊ <b>Functional Details:</b></p> <ul style="list-style-type: none"> <li>• Selection of Parent Project</li> <li>• New Module Name</li> <li>• Description / Remarks</li> </ul> <p>◊ <b>Validation:</b></p> <ul style="list-style-type: none"> <li>• Cannot add module without selecting a valid project.</li> <li>• Displays success confirmation or error messages.</li> <li>• Appears in Module List for selected Project.</li> </ul> <p>◊ <b>Flowchart:</b></p> <pre> graph TD     Start([Start]) --&gt; CreateModule[Create New Module]     CreateModule --&gt; SelectProject[Select Project from Dropdown]     SelectProject --&gt; EnterModule[Enter New Module]     EnterModule --&gt; EnterRemarks[Enter Remarks]     EnterRemarks --&gt; Click[Click 'Create Module']     Click --&gt; Generated[New Module ID Generated]     Generated --&gt; Saved[New Module Saved in Database]   </pre>

# Healthcare Pharmaceuticals Ltd.

<b>4. New Task Entry Interface</b>	<p><b>◆ Purpose:</b> To create specific tasks under a module of a project.</p> <p><b>◆ Functional Details:</b></p> <ul style="list-style-type: none"> <li>• Select Project → Then Module (dependent dropdown)</li> <li>• Task Title and Description / Remarks</li> <li>• On save: Task appears in Dashboard.</li> </ul>	<p><b>◆ Flowchart:</b></p> <pre> graph TD     Start[Start] --&gt; Create[Create New Task]     Create --&gt; Project[Select Project from Dropdown]     Project --&gt; Module[Select Module from Dropdown]     Module --&gt; Click[Click 'Create Task']     Click --&gt; Generated[New Task ID Generated]     Generated --&gt; Saved[New Task Saved in Database]   </pre>
<b>5. New Employee Entry Interface</b>	<p><b>◆ Purpose:</b> To allow the admin or authorized personnel to add new employees into the system.</p> <p><b>◆ Functional Details:</b></p> <p><b>Interface Components:</b></p> <p><b>Employee ID:</b></p> <ul style="list-style-type: none"> <li>○ Manually entered.</li> </ul> <p><b>Employee Name:</b></p> <ul style="list-style-type: none"> <li>○ Full name of the employee.</li> <li>○ Required field.</li> </ul> <p><b>Employee Email:</b></p> <ul style="list-style-type: none"> <li>○ Must follow valid email format.</li> <li>○ Required for task notifications and login (if applicable).</li> <li>○ Checked for uniqueness to avoid duplicates.</li> </ul> <p><b>Contact Info:</b></p> <ul style="list-style-type: none"> <li>○ Phone number or other relevant contact details.</li> <li>○ Must follow phone format validation rules.</li> </ul> <p><b>Designation:</b></p> <ul style="list-style-type: none"> <li>○ Dropdown or text field to enter roles such as "Developer," "Tester," "Manager," etc.</li> <li>○ May be used later for filtering or assigning specific roles.</li> </ul> <p><b>Skills:</b></p> <ul style="list-style-type: none"> <li>○ Multi-line input or tag-based entry.</li> <li>○ Lists technical or domain-specific skills (e.g., C#, React, QA Testing).</li> </ul> <p><b>Add New Employee Button:</b></p> <ul style="list-style-type: none"> <li>○ Submits the data to the backend for storage.</li> <li>○ Displays success confirmation or error messages.</li> </ul>	<p><b>◆ Flowchart:</b></p> <pre> graph TD     Start[Start] --&gt; NewEmployee[New Employee]     NewEmployee --&gt; EmployeeID[Employee ID]     EmployeeID --&gt; EmployeeName[Employee Name]     EmployeeName --&gt; EmployeeEmail[Employee Email]     EmployeeEmail --&gt; ContactInfo[Employee Contact Info.]     ContactInfo --&gt; Designation[Employee Designation]     Designation --&gt; Skills[Skills]     Skills --&gt; Add[Add New Employee]   </pre>

# Healthcare Pharmaceuticals Ltd.

<b>6. Assign Task to Employee</b>	<p><b>◆ Purpose:</b> To provide a structured interface for assigning tasks to specific employees under defined projects and modules.</p> <p><b>◆ Functional Details:</b></p> <ul style="list-style-type: none"> <li><b>• Interface Components:</b> <ul style="list-style-type: none"> <li><b>Dropdown: Project Selection</b> <ul style="list-style-type: none"> <li>○ Lists all active or ongoing projects.</li> </ul> </li> <li><b>Dropdown: Module Selection</b> <ul style="list-style-type: none"> <li>○ Dynamically loads only the modules under the selected project.</li> </ul> </li> <li><b>Dropdown: Task Selection</b> <ul style="list-style-type: none"> <li>○ Loads tasks under the selected module.</li> </ul> </li> <li><b>Dropdown: Employee Selection</b> <ul style="list-style-type: none"> <li>○ Lists all employees.</li> <li>○ May include optional filters (by role, department, workload—future scope).</li> </ul> </li> </ul> </li> <li><b>Attach files:</b> Filed to attach briefs, designs, PDFs etc.</li> <li><b>Assign Button:</b> <ul style="list-style-type: none"> <li>○ On click ‘Assign Task’, the selected task is assigned to the chosen employee.</li> <li>○ Displays a confirmation message upon success.</li> </ul> </li> </ul>	<p><b>◆ Flowchart:</b></p> <pre> graph TD     Start([Start]) --&gt; Assign[Assign Task to Employee]     Assign --&gt; SelectProject[Select Project from Dropdown]     SelectProject --&gt; SelectModule[Select Module from Dropdown]     SelectModule --&gt; SelectTask[Select Task from Dropdown]     SelectTask --&gt; SelectEmployee[Select Employee from Dropdown]     SelectEmployee --&gt; ClickAssign[Click 'Assign Task']   </pre>
<b>7. Filtering &amp; Search</b>	<p><b>◆ Purpose:</b> To quickly locate tasks by filters such as project, module, employee, status, or date range.</p> <p><b>◆ Functional Details:</b></p> <ul style="list-style-type: none"> <li>• Search bar for feature title/keywords</li> <li>• Filter dropdowns: <ul style="list-style-type: none"> <li>○ By Project</li> <li>○ By Module</li> <li>○ By Employee</li> <li>○ By Status</li> <li>○ By Date or Deadline</li> </ul> </li> <li>• Instant display of filtered tasks</li> <li>• Export filtered view as CSV or PDF (Future Scope)</li> </ul>	
<b>8. Employee Information Interface</b>	<p><b>◆ Purpose:</b> To maintain employee profiles and manage internal user data.</p> <p><b>◆ Functional Details:</b></p> <ul style="list-style-type: none"> <li>• List view of all registered employees.</li> <li>• <b>Detailed info per employee:</b> <ul style="list-style-type: none"> <li>○ Name</li> <li>○ ID, Role (Admin, Manager, Developer)</li> <li>○ Email, Phone</li> <li>○ Designation, Department, Skills</li> <li>○ Total Tasks Assigned</li> <li>○ Current Workload</li> </ul> </li> <li>• Edit/Update/Delete option for Admin</li> <li>• Status (Active/Inactive)</li> </ul>	
<b>6. Future Scope</b>		
<b>1. Project &amp; Module Management Dashboard</b>	<p><b>◆ Purpose:</b> To monitor the current status and progress of all ongoing projects and their modules.</p> <p><b>◆ Functional Details:</b></p> <ul style="list-style-type: none"> <li>• <b>Overview cards for each project:</b> <ul style="list-style-type: none"> <li>○ Total Modules</li> <li>○ Completed Tasks</li> <li>○ Pending Tasks</li> <li>○ Overall Progress (%)</li> </ul> </li> <li>• Expand each Project to view associated Modules and Task summary</li> <li>• Status color codes (Red for overdue, Yellow for ongoing, Green for completed)</li> </ul>	

# Healthcare Pharmaceuticals Ltd.

## 7. Non – Functional Feature Analysis

### 1. Performance

- The system should load pages within 2 seconds.
- Task assignment, search, and dashboard updates should be real-time or near-instant.

### 2. Usability

- The interface should be simple and user-friendly, so that even non-technical employees can use it without training.
- Dropdowns, forms, and dashboard must be easy to understand and navigate.

### 3. Reliability

- The system should work consistently without crashes or data loss.
- It should handle multiple users using the system at the same time without issues.

### 4. Security

- User passwords must be encrypted.
- Only logged-in users can access task/project data.
- Different roles (like Admin, Developer, Manager) should have restricted access to certain features.

### 6. Maintainability

- The code should be written in a clean and organized way so developers can easily update or fix issues.
- Error messages should be clear for quick debugging.
- The database and UI should be flexible for future feature additions.

### 7. Portability

- The system should work on modern web browsers like Chrome, Firefox, and Edge.
- It should be deployable on any standard hosting environment.

### 8. Data Integrity

- The system must ensure that task assignments are accurate and no duplicates are created.
- No two employees can be accidentally assigned the same unique task without tracking.

## 8. Quality Control

### Quality Assurance (QA)

#### Purpose:

To ensure the development process follows best practices and standards so that quality is built into the product from the beginning.

#### Details to Maintain:

- QA will be maintained from the planning phase.
- Proper documentation, wireframes, and requirement reviews will be part of QA.
- Code reviews and peer collaboration will be ensured before moving to testing.
- Clear communication will be maintained between developer and tester to avoid misunderstanding of features.

### Quality Control (QC)

#### Purpose:

To check the final product for defects or issues before delivery.

#### Details to Maintain:

- The final system will be verified against the documented requirements.
- All forms, dashboards, and dropdowns will be tested to ensure they work correctly.
- Task assignment logic will be cross-checked to make sure tasks are not misassigned.
- Validation messages, error handling, and edge cases will be tested.

# Healthcare Pharmaceuticals Ltd.

## 9. Testing Phase

### Purpose:

To identify and fix bugs, confirm that all functional requirements are met, and the system behaves as expected.

### Details to Maintain:

#### a. Test Planning

- A test plan will be created with defined test cases for each feature.
- Testing will cover both functional and non-functional areas.

#### b. Types of Testing

- **Unit Testing:** Each function (like form submission, dropdown selection) will be tested individually.
- **Integration Testing:** Check how the modules interact (e.g., assigning a task based on selected project and module).
- **System Testing:** Test the system as a whole (full workflow of creating a task and assigning it).
- **User Acceptance Testing (UAT):** Final testing from a user's point of view to confirm it's ready for deployment.

#### c. Bug Tracking & Fixing

- Bugs found during testing will be logged with details like feature name, steps to reproduce, expected vs. actual behavior.
- Bugs will be fixed and retested before marking the feature as "complete."
- Retesting after bug fixes will be tracked separately to ensure no regression occurs.

## 10. Notes

## Revision History
